- * Florida State College of Medicine

BRETT FAVRE
"I FEEL GREAT"

MIKE VICK
"AFTER MY FIRST INFUSION, I FELT LIKE I WAS 22"

Who is Pro-IV? Pro-IV is a collaboration of World renowned athletes and World renowned physicians to create therapies to improve the safety, performance and quality of life, pre and post career for athletes.

What is DripFusion? DripFusion is a process by which Pro-IV intravenously dripfuses (IV) premium quality micronutrients and when necessary, FDA approved pharmacological (medicine) agents to reduce inflammation and mitigate targeted chronic issues.

What are Micronutrients? Chemical element or substance required in trace amounts for the normal growth and development of living organisms. (Trace Minerals or Vitamins)

Is Pro-IV recognized by Professional Sports Leagues? Pro-IV's formulations have been approved by the PGA Tour as our formulations are NON-OPIOID AND NON STEROID. More importantly, our formulations DON'T CONTAIN ANY BANNED SUBSTANCES. The NFLPA is awaiting results from the NFL 100 Study recently launched to "officially" document safety and efficacy with retired NFL Players.

What is an Opioid? Opioids are addictive, powerful pain medications commonly prescribed by physicians whose patients are combating severe injury. (Codeine, Hydrocodone, Demerol, Hydromorphone, Methadone, etc.)

Why are Opioids harmful? For the more common pain conditions—like back pain, chronic headache, and fibromyalgia—opioids may at some point offer little or no relief but cause side effects. Opioids can cause severe constipation as well as dangerous sedation. A person who takes an opioid can become cognitively impaired and confused.

Why are Opioids addictive? Brain abnormalities resulting from chronic use of heroin, oxycodone, and other morphine-derived drugs are underlying causes of opioid dependence (the need to keep taking drugs to avoid a withdrawal syndrome) and addiction (intense drug craving and compulsive use).

Why IV infusions better than oral consumption? The medical community for decades has recognized the importance of vitamins and minerals. To date, oral consumption has been the primary mode of disbursement to the body. Unfortunately, absorption, excretion and other factors reduce potency and effectiveness by as much as 70%. With Pro-IV, "YOU GET WHAT YOU PAY FOR!"

What can I expect? In addition to the obvious of pain relief, you can expect to have more energy and more importantly, Pro-IV is designed to help the body perform at its optimal level.

What is the importance of customized infusions? Everyone's nutritional requirements are unique and Pro-IV has developed foundational formulations will significantly improve your current nutritional intake. More over, your physician also knows "your" individual needs and upon consultation, the physician will prescribe any additional elements or agents to meet your individual requirements.

How many treatments do I need? By design, Pro-IV "replenishes" vital nutrients lost due to a broad spectrum of factors ranging from replenishing minerals depleted from everyday life to vigorous workout to minerals depleted as a result of chronic disease or even, pregnancy.

How much does the treatments cost? See management.

How long does it last? For consistency of bioavailability, our infusion algorithm recommends weekly infusions. However, bi-monthly infusions will also yield positive results.

How do I know it's working? "SIMPLE MATH!" Up to 70% of oral vitamin and mineral intake is lost to absorption, excretion and other bodily function. With Pro-IV, you can get up to 3 TIMES the absorption of oral consumption.
